|----------|----------------|-----------|----------|-----------------------|---|
| | Cavity #1 | Cavity #2 | | | |
| 1 | 295 | 315 | 295 | 0.9463 | Average emissivity from three test runs at maximum emissivity wavelength of 9.5 μm : 0.951 |
| 2 | 295 | 315 | 295 | 0.9572 | |
| 3 | 295 | 315 | 295 | 0.9495 | |

COMMENTS

- The test per ASTM E903-82/92 (solar reflectance/absorptance) and ASTM E408-71/96. Test conditions: T=22°C, RH=37%, P=101.6±0.1 kPa.
- The values in the table 1 are the average from three test runs at the same frequency. The reflectance (reflectivity) magnitudes are for 6-degree hemispherical geometry. The maximum uncertainty of the reflectivity measurements is equal or smaller than 0.007.
- The emissivity was measured per Method A of ASTM E408.
- Standard reference material NIST SRM 2044 was used for the test setup calibration. The working standards used: BaSO₄ tablets, AlfaAesar Cat. No.10651 (2001-2002), and the polished chromium foil (e=0.08) for test No. 1 and No. 2, respectively.
- INSTRUMENTS AND DEVICES USED
 - Spectrophotometer Model Lambda-900 PE (175-3300 nm)
 - Integrating Sphere Model PELA-1000 PE
 - Integrated Photometer Model 3000 SAI Techn.
 - Infrared Reflectometer Model DB100 GDI, Emissometer Model Temp2000A AZ Techn.
 - Light Meter Model 840006 SPER Sci.
 - Starrett Dial Indicator Model 25-109 (1270 nm/div)
 - Digital Hygrothermometer Model 63-844 MI, Barometer Model 602650 SB.
- The equipment used in the test meets the applicable NIST, ASTM, ASME, OSHA, and State requirements and was calibrated with the standards traceable to the NIST. The calibration was performed per ISO 9001 §4.11, ISO 9002 §4.10, ISO 9003 §4.6, ISO 9004 §13, MIL-STD-45662, MIL-I-45208, NAVAIR-17-35-MTL-1, CSP-1/03-93, and the instrument manufacturers' specifications.
- The equipment passed a periodic accuracy test in June 2001. Next test - June 2002.
